CONTENTS

Part I.—Report of the Director of Public Health, Bengal

CHAPTER I.—Vital Statistics.

CHAPTER II.—History of chief diseases.

CHAPTER III.—Fairs and Festivals.

CHAPTER IV.—Urban sanitation and water-supply.

CHAPTER V—Rural sanitation.

CHAPTER VI.—Malaria and Kala-azar.

PART II.—APPENDICES.

APPENDIX I.

Vital Statistics in the districts of Bengal for the year 1941.

APPENDIX II.

Statement of vaccination operation in Bengal.

APPENDIX III.

Statements showing health services and maternity and child welfare centres in Bengal in 1941.

APPENDIX IV.

Statements showing the details of nutrition and diet surveys in Bengal during the year 1941.

Seventy-fourth Annual Report of the Director of Public Health, Bengal, 1941.

Chapter I.

VITAL STATISTICS.

1. **Population.**—The population of the Bengal Presidency excluding the Chittagong Hill Tracts, Cooch Behar and Tripura States according to the 1931 census was 49,901,080. The estimated mid year population since 1931 and the percentage of increase of population over that of the previous year are given below—

Years.	Estimated mid year population.	Percentage of increase in population over that of the previous year.
1931	50,046,202	..
1932	50,243,355	·4
1933	50,602,842	·7
1934	50,837,178	·5
1935	51,231,433	·8
1936	51,674,916	·9
1937	52,195,805	1·0
1938	52,583,541	·7
1939	52,798,320	·4
1940	53,428,560	1·2
1941	53,923,180	·9

The trend of the estimated mid year population during the past decennium in this province showed clearly that the population of the province was growing. The vital index of the province for 1941 was 134·5 against 151·4 in the previous year. This showed that the population was biologically healthy.

Owing to the non-receipt of 1941 census figures, 1931 census figures were used in calculating the vital statistical rates given in this report unless otherwise stated.

2. *Registration of births and deaths.*—The number of unregistered births and deaths detected during 1941 were 7,610 and 3,143 as against 8,471 and 3,179, respectively, in the previous year.

Four hundred and twenty-one defaulters under the Bengal Births and Deaths Registration Act were prosecuted during 1941, of whom 367 were convicted, 29 acquitted and 25 were pending trial.

3. Chief Vital Statistics recorded during the year 1941 in the Beng[al] Presidency are shown in the following tables:—

SECTION I.—Provincial births:—

—	Urban.			Rural.			Provincial.		
	Male.	Female.	Total.	Male.	Female.	Total.	Male.	Female.	Total.
1941.									
Births ..	46,303	40,197	86,500	782,105	725,686	1,507,791	828,408	765,883	1,594,2[illegible]
Birth rate per mille	13 ·2	11 ·4	24 ·6	16 ·8	15 ·7	32 ·5	16 ·6	15 ·3	31·[illegible]
1940.									
Births ..	46,852	41,309	88,161	825,639	768,046	1,593,685	872,491	809,355	1,681,8[illegible]
Birth rate per mille	13 ·4	11 ·7	25 ·1	17 ·8	16 ·6	34 ·4	17 ·5	16 ·2	33·[illegible]
Increase (+), decrease (−) in 1941 over 1940.	−1 ·6	−2 ·6	−2 ·0	−5 ·6	−5 ·1	−4 ·1	−5 ·1	−5 ·6	−5·[illegible]

SECTION II.—Provincial deaths.—

—	Urban.			Rural.			Provincial.		
	Male.	Female.	Total.	Male.	Female.	Total.	Male.	Female.	Total.
1941.									
Deaths ..	42,741	35,872	78,613	574,136	532,101	1,106,237	616,877	567,973	1,184,8[illegible]
Death rate per mille	19 ·4	27 ·3	22 ·4	24 ·2	23 ·5	23 ·8	23 ·8	23 ·7	23·[illegible]
1940.									
Deaths ...	39,960	32,047	72,007	537,039	502,030	1,039,075	576,999	534,083	1,111,0[illegible]
Death rate per mille	18 ·2	24 ·4	20 ·5	22 ·6	22 ·2	22 ·4	22 ·3	22 ·3	22·[illegible]
Increase (+), decrease(−) in 1941 over 1940.	+6 ·6	+11 ·9	+9 ·2	+7 ·0	+5 ·8	+6 ·2	+6 ·7	+6 ·2	+6·[illegible]

SECTION III.—Birth and death rates and still-birth and infant death rat[es] per 1,000 live-births according to the principal communities.

Communities.	Birth rates per mille of population.	Death rates per mille of population.	Still-births per 1,000 of live births.	Infant death[s] per 1,000 o[f] live births.
Hindus	31·2	22·2	31·8	146·9
Muslims	32·1	24·6	44·4	163·3
Christians	28·0	15·6	24·7	107·9
Buddhists	26·7	24·1	42·5	..
Other classes	57·2	40·8	35·4	139·5
Province	31·9	23·7	38·8	155·7

The above table furnishes an index to the actual social, economic an[d] educational condition of the various communities.

(*i*) *Births*.—There were 1,594,291 births registered in the year unde[r] report as against 1,681,846 in 1940. The birth rate was 31·9 per mill[e] being 5·3 per cent. lower than that in 1940. Appendix I would show tha[t]

the highest birth rate of 41·4 per mille was recorded in the district of Murshidabad while the lowest (20·4 per mille) in the Malda district. Excluding "Other classes", highest birth rate of 32·1 was recorded among the Muslim community while the lowest (26·1) was among the Buddhists. The number of male births per 100 female births was 108 as in the previous year.

(*ii*) *Deaths*.—1,184,850 deaths were registered in the province during 1941 yielding a death rate of 23·7 per mille, as compared with 1,111,082 deaths in 1940 with a rate of 20·3 per mille. The mortality rate, therefore, increased by 6·6 per cent. over that of the previous year. The highest death rate of 33·5 per mille was returned by the Darjeeling district while Malda recorded the lowest death rate (13·8 per mille). Excluding "Other classes", the Muslims were responsible for the highest death rate of 24·6 per mille while the lowest (15·6 per mille) occurred among the Christians.

(*iii*) **Still-births.**—The number of still-births in the province was 61,904 returning a rate of 3·9 per 100 live-births as against 69,844 in 1940 with a rate of 4·2. The still-birth rate decreased by 12·9 per cent. compared with the previous year. In the urban areas the still-birth rate was 4·6 per 100 live-births, while in the rural areas, the corresponding rate was 3·8. The rate was highest among the Muslims and lowest among the Christians.

(*iv*) **Infant deaths.**—Total deaths under one year numbered 248,226 (urban 14,159 and rural 234,067) during 1941 giving an infantile death rate of 155·7 per mille of live-births against 159·3 in the previou year. Compared with the previous year the infantile mortality rate decreased by 2·3 per cent.

The highest infantile mortality rate of 163·3 was recorded among the Muslims and the lowest (107·9) among the Christians.

(*v*) **Maternal deaths.**—14,803 mothers died as a result of child birth during 1941 giving a death rate of 8·9 per 1,000 births (live and still) as against 9·2 in 1940. Of these maternal deaths 14,080 occurred in the rural and 723 in the urban areas, and the respective mortality rates were 9·0 and 8·0 per 1,000 births against 9·1 and 7·3 in the previous year.

Chapter II.

HISTORY OF CHIEF DISEASES.

4. **General remarks on health of the province.**—The statement below would show that the health of the province was much worse during the year under report:—

Causes.	Death rate per mille of population. 1940.	1941.	Percentage to total deaths in 1941.
Cholera	0·40	1·2	5·22
Small-pox	0·11	0·3	1·12
Plague	0·00	0·00	0·00
Fever	14·38	14·7	61·85
Malaria	7·40	7·8	32·78
Enteric fever	0·16	0·18	0·76
Measles	0·12	0·07	0·27
Relapsing fever	0·00	0·00	0·00
Kala-azar	0·31	0·33	1·38

Causes.	Death rate per mille of population. 1940.	1941.	Percentage to total death in 1941.
Influenza	0·04	0·04	0·15
Cerebrospinal fever	0·03	0·02	0·08
Typhus fever	0·10	0·11	0·48
Black-water fever	0·004	0·01	0·03
Other fevers	6·21	6·16	23·93
Dysentery	0·50	0·55	2·31
Diarrhoea	0·41	0·48	2·04
Respiratory diseases	1·71	1·7	7·14
Pneumonia	0·90	0·90	3·78
Pulmonary tuberculosis	0·25	0·26	1·09
Whooping cough	0·04	0·06	0·25
Other respiratory diseases	0·52	0·48	2·03
Injuries	0·41	0·43	1·81
Homicide	0·003	0·01	0·03
Suicide	0·07	0·06	0·24
Wounds and accidents	0·26	0·3	1·18
Snake bites	0·07	0·08	0·30
Killed by wild animals	0·01	0·005	0·02
Rabies	0·01	0·01	0·04
All other causes	4·32	4·40	18·50
Anthrax	0·00	0·00	0·01
Beri-Beri	0·02	0·01	0·05
Acute poliomyelities	0·01	0·02	0·08
Diphtheria	0·01	0·02	0·06
Chicken-pox	0·01	0·02	0·09
Epidemic dropsy	..	0·01	0·05
Mumps	0·002	0·003	0·01
Tuberculosis of joints	0·01	0·005	0·02
Tuberculosis of meningitis	..	0·002	0·01
Other tubercular diseases	0·02	0·02	0·10
Leprosy	0·03	0·03	0·13
Cancer	0·02	0·02	0·08
Deaths from child birth	9·21	8·9*	1·25
Other causes	3·86	3·98	16·55

* Per 1,000 of births.

Compared with the previous year, the death rates from the principal diseases, viz., Malaria, cholera and small-pox were higher.

5. **Cholera.**—During the year under report, 61,879 deaths from cholera were registered, of whom urban areas accounted for 4,061 deaths and, rural areas 57,818 with a death rate of 1·1 and 1·2 per mille as against 0·5 and 0·4 per mille respectively in the previous year. The death rate for the province as a whole was 1·2 per mille as against the quinquennial average rate of ·9 per mille and the previous year's rate of ·4 per mille.

Statistical analyses revealed that cholera moved in a cyclic course of six years and as the previous year's cholera incidence was the lowest on record, it could be reasonably apprehended that the disease for the year under report would take an upward trend.

6. **Preventive measures.**—3,482,398 anti-cholera inoculations were performed during 1941 as against 1.353.793 in 1940. Other anti-epidemic measures consisted of disinfection of 1,273 river ghats, 12,544 houses, 239,103 wells and 39,693 tanks. Ninety-seven epidemic doctors, 32 sanitary inspectors and one health assistant were employed to assist the various local bodies in anti-cholera work in the province during the year under report.

7. **Small-pox.**—13,250 deaths were registered under this head, of which 6,366 occurred in the towns and 6,884 in rural areas giving a death rate of 1·8 and ·1 per mille as against ·68 and ·06 per mille, respectively, in the previous year. The mortality rate from small-pox for the whole province was ·3 per mille as compared with ·4 per mille during the previous quinquennium and the preceding year's rate of ·1 per mille.

The small-pox mortality by districts and sex are shown in the statement VIII, appendix I. Out of 13,250 deaths from small-pox, 1,254 occurred among infants under one year, 2,094 among children between one and ten years.

8. **Anti-small-pox measures.**—Please see the chapter on vaccination.

9. **Plague.**—Two deaths from plague imported from Jaunpore and United Provinces were recorded in Calcutta during the year under report as against a similar one in the Burdwan district in the previous year.

10. **Fevers.**—732,884 persons died of fevers in 1941 as against 717,516 in 1940 showing an icrease of 2·1 per cent. over the previous year. The following table furnishes the details of fever mortality registered in 1941 and 1940:—

Causes.	Number of fever deaths.		Death rate per mille.		Percentage of increase or decrease.	Percentage of total fever mortality.	
	1940.	1941.	1940.	1941.		1940.	1941.
Malaria	369,448	388,381	7·40	7·80	+5·41	51·49	52·99
Kala-azar	15,453	16,349	·31	·33	+6·45	2·15	2·23
Enteric	7,875	8,948	·16	·18	+1·25	1·16	1·22
Influenza	2,127	1,759	·04	·04	+0	·30	·24
Cerebrospinal fever ..	1,378	955	·03	·02	—33·3	·19	·13
Black water fever ..	207	313	·00	·01	+150·0	·03	·04
Relapsing fever (spirochaetal). ..	2	14	·0000	·000:	+115·38	·0003	·002
Typhus	5,183	5,640	·10	·11	+9·09	·72	·77
Measles	5,789	3,272	·12	·07	—41·66	·81	·45
Other fever	310,054	307,253	6·21	6·16	—·81	43·21	41·93
Total ..	717,516	732,884	14·38	14·7	+2·23	100	100

The above table indicates that malaria alone claimed 52·99 and "other fevers" 41·93 per cent. of the total mortality under fever.

The mortality rates for fever in urban and rural areas were 3·9 and 15·5 per mille, respectively, as against 3·9 and 15·2 per mille in the previous year.

11. **Malaria.**—There were 388,381 deaths from malaria during 1941 as compared with 369,448 during the previous year showing an increase of 5·1 per cent. The mortality rate was 7;8 per mille as against 7·4 in the previous year. Malaria was responsible for 32·8 per cent. of the total deaths recorded in the province in 1941. The number of deaths from malaria in urban and rural areas were 2,077 and 386,304, respectively, and the respective mortality rates were 0·59 and 8·3 per mille. The highest death rate of 19·77 per mille was recorded in the Jessore district, while the lowest rate of 0·48 was recorded in Calcutta.

12. **Kala-azar.**—16,349 persons died of kala-azar during the year giving a mortality rate of 0·33 per mille as against 15,453 with a death rate of 0·31 per mille in the previous year. There was thus an increase of 6·4 per cent. over 1940. The death rates in the urban and rural areas were 0·1[illegible] and 0·33 per mille, as against 0;16 and 0·32, respectively, in the previous year.

13. The table below will show the comparative intensity in the urban and rural areas as well as in the province of the remaining diseases under "Fever group" in 1940 and 1941 :—

Causes.	Urban.				Rural.				Provincial.			
	1940.		1941.		1940.		1941.		1940.		1941.	
	Deaths	Rates per mille.	Death	Rate per mille.	Deaths.	Rate per mille.	Deaths.	Rate per mille.	Deaths.	Rate per mille.	Deaths.	Rate per mille.
Influenza ..	384	·11	297	·08	1,743	·04	1,462	·03	2,127	·04	1,759	·04
Enteric group of fever.	1,950	·56	1,986	·56	5,925	·13	6,962	·20	7,875	·16	8,948	·18
Measles ..	475	·14	275	·08	5,314	·11	2,997	·06	5,789	·12	3,272	·07
Relapsing fever (spirochaetal).	..	..	..	..	2	·00	14	·00	2	·00	14	·00
Typhus fever	89	·03	55	·02	5,094	·11	5,585	·12	5,183	·12	5,640	·1[illegible]
Black-water fever.	7	·00	8	·00	200	·004	305	·007	207	·004	313	·01
Cerebrospinal fever.	315	·09	152	·04	1,063	·02	803	·02	1,378	·03	955	·02
Other fevers	8,019	2·3	8,329	2·4	302,035	6·5	298,924	6·4	310,054	6·21	307,253	6·16

14. **Dysentery and diarrhoea.**—Dysentery and diarrhoea were together responsible for 51,529 deaths in 1941 as against 45,422 in 1940, with the mortality rates of 1·03 and 0·91 per mille, respectively. The increase in mortality rate over that of the previous year was 13·2 per cent.

15. **Respiratory diseases.**—This cause accounted for 84,647 deaths in 1941 as against 85,203 in 1940, the respective mortality rates being 1·70 and 1·71 per mille. The decrease as compared with the previous year, was very slight. As usual the highest death rate of 7;86 per mille was recorded in Calcutta and Malda district continued to return the lowest death rate (viz. 0·29 per mille) from this cause.

16. **Pneumonia.**—44,801 deaths were registered under pneumonia with mortality rate of 0·9 per mille as against 44,967 deaths with a rate of 0· per mille in 1940. Pneumonia was responsible for 52·9 per cent. of the total deaths from respiratory diseases. 4,352 deaths were registered in the urban areas and 40,449 in the rural areas with death rates of 1·2 and 0·9 per mille respectively.

17. **Pulmonary tuberculosis.**—12,867 persons died of pulmonary tuberculosis duding 1941 as against 12,363 in 1940, the mortality rates being 0·26 and 0·25 per mille in 1941 and 1940, respectively. Compared with the previous year the death rate increased by 4 per cent. in the year under report. The deaths from the disease in the rural and urban areas were 8,322 and 4,545, respectively, yielding a death rate of 0·20 and 1·29 per mille, as against 0·17 and 1·26 in the previous year. Calcutta with a death rate of 2 64 per mille was alone responsible for 66·2 per cent. of the deaths recorded in the urban areas.

18. **Preventive measures.**—In accordance with the approved scheme for prevention and control of tuberculosis in Bengal the Civil Surgeons of 10 districts were addressed by the Bengal Public Health Department for opening chest clinics at district headquarters. The results will be discussed in the next year's report.

19. **Activities of the Bengal Tuberculosis Association.**—A grant of Rs. 10,000 was sanctioned to this Association from the provincial revenues for carrying out in 1941 an anti-tuberculosis campaign which consisted mainly of the following measures:—

(1) Maintenance of six dispensaries in Calcutta and one in Howrah and three tuberculosis clinics at three mofussil towns;

(2) training of health visitors and medical men in anti-tuberculosis work;

(3) opening of a tuberculosis clinic at Comilla; and

(4) anti-tuberculosis propaganda through lantern lectures, cinema shows and radio talks.

20. **Tuberculosis survey at Barisal and Serampur.**—Both the surveys at Barisal and Serampur were continued during the year under report and statistics of a very revealing nature have been collected for future publication and use.

21. **Activities of the Jadavpur tuberculosis hospital and the Kurseong sanatorium.**—The table below will show the number of patients treated in and discharged from these two medical institutions during the year under report:—

	Number of patients continued from the previous year.	Number of new admission in the year 1941.	Total number of patients treated.	Number of patients discharged.
Jadavpur tuberculosis hospital	166	233	399	224
Kurseong sanatorium ..	8	44	52	37

22. **Whooping cough.**—2,921 deaths with a death rate of ·06 per mille were recorded during 1941 as against 1,837 deaths with a death rate of 0·04 per mille in 1940.

23. **Other respiratory diseases.**—24,058 deaths were recorded under "Other respiratory diseases" in 1941 as against 26,036 in 1940, the mortality rate being 0·48 and 0·52 per mille, respectively.

24. **Injuries.**—21,476 deaths were recorded under injuries with a rate of 0·43 per mille as against 20,254 deaths giving a death rate of 0·41 per mille, in 1940 showing an increase of 4·8 per cent. over that of the previous year. Out of the total deaths, 13,956 were due to wounds and accidents, 3,593 to snake-bites, 2,834 to suicides, 474 to rabies, 358 to homicides, and 261 were killed by wild animals.

25. **Leprosy.**—During the year under report 1,596 deaths from lepros were recorded of which 1,556 occurred in rural areas and 40 in the urba areas, the mortality rates being 0·03 and 0·01 per mille respectively a against 1,304 deaths (1,273 in rural and 31 in urban areas) in 1940 with th death rate of 0·03 per mille (0·03 and 0·01 per mille in rural and urba areas respectively). The percentage of leper deaths in rural and urba areas were 97·49 and 2·51, respectively. Calcutta did not record any deat from leprosy. Seventy-five leprosy clinics in six districts were workin During 1941 leprosy clinics were working in six municipalities. The numb of lepers treated were 216 as against 173 in the previous year. The followin schemes were sanctioned by Government during 1941 :—

(1) Bogra district board leprosy scheme for 1 centre.

(2) Bankura district board leprosy scheme for 33 centres.

(3) Hooghly district board leprosy scheme for 1 centre.

(4) Rajshahi municipal leprosy scheme for 1 centre.

26. **All other causes.**—The deaths under this head numbered 219,18 in 1941 yielding a death rate of 4·4 per mille as against 215,335 in 1940, wit a death rate of 4·3 per mille.

Chapter III.

FAIRS AND FESTIVALS.

27. The provision of protected water-supply, efficient conservancy, mas inoculation and arrangement for wholesome food-stuff and proper accommo dation of the pilgrims were the main items of the preventive measures take by the Public Health Department with the co-operation of the local bodie in the case of major melas which were, viz., (1) Ganga Sagar mela, (2 Langalband mela, (3) Sitakunda mela, (4) Allowakhowa mela and (5 Tarakeswar mela during the year under report. About 90,000 pilgrim assembled at the Ganga Sagar mela where only four deaths from cholera wer recorded. No death was reported from any of the other melas.

Chapter IV.

URBAN SANITATION AND WATER-SUPPLY.

28. **Sanitary administration.**—The public health duties in the municipali ties were carried out mainly by health officers, sanitary inspectors, assistan sanitary inspectors and vaccinators. For 118 municipalities excludin Calcutta, 33 health officers and 110 sanitary inspectors and one assistant sani tary inspector were employed during 1941 as against 25 health officers, an 122 sanitary inspectors in the previous year. Twenty-five municipalitie did not employ either a health officer or a sanitary inspector as against 2 municipalities in the previous year. The public health duties in these muni cipalities were carried out by the sanitary inspectors of the district board or of the neighbouring municipalities.

29. **Registration of vital events.**—Separate registrars were not employe by any municipality for the registration work alone. In Ranaghat muni cipality, the sanitary inspector was in charge of this work. Two municipali ties employed sub-registrars while other municipalities took recourse t

various agencies such as ghat priest, fuel contractor, dome, etc., to report deaths from burial ground or burning ghats.

30. **Water-supplies.**—Filtered water was supplied through pipes in 51 municipalities. 2,837 tube-wells were sunk in 97 municipalities during 1941.

31. **Drainage.**—The total length of pucca drains constructed in 92 municipalities during 1941 was 658 miles, 973 yards and 46 feet approximately.

32. **Disposal of refuse and night-soil.**—Out of 118 municipalities excluding Calcutta, only 3 had efficient method of disposal of night-soil either by septic tank or sewerage system.

33. **Wholesomeness of food.**—The total number of samples of food-stuffs seized was 3,704 in 72 municipalities and 1,145 prosecutions were made in 61 municipalities during the year under report.

34. **Malaria.**—Eighty-seven municipalities were provided with general hospitals. Number of new cases of malaria admitted during 1941 was 211,350 and old cases were reported to be 708,888. A sum of Rs. 20,039 was spent on anti-malarial measures as against Rs. 43,986 in the previous year.

35. **Income and expenditure of municipalities.**—The receipts and expenditure of the municipalities with reference to public health administration detailed below were extracted from the Divisional Commissioners' reports on the work of the municipalities in Bengal during 1940-41.

During the year 1940-41, the number of ratepayers in the 118 municipalities of the province excluding Calcutta was 407,078 or about 17·2 per cent. of the total population of the municipal areas as compared with 392,705 or 16·8 per cent. in the previous year. The total receipts including the opening balance of Rs. 17,68,993 amounted to Rs. 1,24,82,942 during 1940-41, the corresponding figures for 1939-40 being Rs. 24,63,520 and Rs. 1,38,36,717. The total receipts therefore decreased by Rs. 13,53,775 or 10·8 per cent. The amount of average receipts in each municipality was Rs. 1,05,788. The average incidence of taxation per head of population was Rs. 3-9-3 in 1940-41 against Rs. 3-6-1 in 1939-40.

The total expenditure excluding extraordinary items and debts was Rs. 1,02,75,460 in 1940-41 against Rs. 1,03,12,030 in 1939-40 showing a decrease of Rs. 36,570 or ·4 per cent.

The following table shows the expenditure under the principal heads and their proportion to total receipts including the opening balance:—

Heads.	Total expenditure during 1940-41.	Percentage of expenditure to the total receipts.		Increase +or decrease —over 1939-40.
		1939-40.	1940-41.	
	Rs.			
Public health	52,26,801	38·4	41·9	+3·5
Public safety	9,40,456	6·6	7·5	+0·9
Roads	11,35,543	8·8	9·1	+0·3
All other requirements	29,72,660	20·6	23·8	+3·2

The average expenditure per head of municipal population on the several public health items is given below:—

Items.	Total expenditure during 1940-41.	Average expenditure per head of population. 1939-40.			1940-41.			Percentages of increase + or decrease —.
	Rs.	Rs.	a.	p.	Rs.	a.	p.	
Conservancy	25,77,597	1	0	10	1	1	5	+3·5
Water-supply	11,28,936	0	8	9	0	7	7	—13·3
Drainage	4,48,164	0	3	6	0	3	0	—14·3
Disposal of dead bodies and burial and burning ghat charges	66,582	0	0	6	0	0	5	—·8
Markets and slaughter houses	57,869	0	0	5	0	0	5	±0
Hospitals and dispensaries and plague charges ..	4,94,062	0	3	3	0	3	4	+·03
Vaccination	51,314	0	0	4	0	0	4	±·0
Charges on account of health officers and sanitary inspectors	2,43,229	0	1	8	0	1	8	±0
Registration of births and deaths	21,645	0	0	2	0	0	2	±0
Other sanitary requirements	1,37,403	0	0	11	0	0	11	±0
Total ..	52,26,801	2	4	4	2	3	3	—3·0

Compared with the previous year, the expenditure per head of population in respect of conservancy, hospitals and dispensaries and epidemic charges increased while that on water-supply, drainage and disposal of dead bodies and burial and burning ghat charges decreased. The expenditures under other heads practically remained the same as in the previous year.

The total expenditure incurred by some of the municipalities during 1940-41 on certain subsidiary heads is shown below.—

	1939-40.	1940-41.
	Rs.	Rs.
(1) Anti-malaria measures	43,986	20,039
(2) Public health propaganda work including health exhibitions ..	1,893	1,479
(3) Infectious diseases hospitals	33,310	47,906

The municipalities which incurred capital expenditure of Rs. 5,000 and above on water-supply and drainage are noted below:—

(a) Water-supply.

	Rs.
Hooghly-Chinsura	7,535
Howrah	5,575
Tollyganj	6,341
Krishnagar	6,134
Berhampore	7,003
Darjeeling	62,215
Dacca	22,094
Chittagong	5,081
Chandpur	15,319

(b) Drainage.

Tollyganj	7,280
Bhatpara	17,258
Baranagar	5,702
Garden Reach	8,269
Howrah	30,845

Chapter V.

RURAL SANITATION.

36. **Rural sanitation.**—The following main difficulties stood in the way of rural public health organisation:—

(1) scattered nature of the population,
(2) problem of safe water-supply,
(3 problem of satisfactory disposal of night-soil, and
(4) conservative nature of the people.

The statement A in the Appendix III will show the number of the health staff employed in the rural districts of Bengal. Sixteen districts did not employ female vaccinators at all. Greater susceptibility of females to small-pox infection may be ascribed to the system of purdah and paucity of female vaccinators. The new system of transmission of vital statistics through sanitary inspector was extended to the district of 24-Parganas.

The following statement indicates the comparative public health activities in the rural areas of Bengal during the years 1940 and 1941:—

		1940.	1941.
Number of births verified	...		1,46,301
Omissions detected	...	8,471	7,610
Number of deaths verified	...		81,969
Omissions detected	...	3,179	3,143
Causes of deaths verified	...		16,734

Malaria still remained the main problem in the rural areas. The deaths from malaria increased from 367,481 in 1940 to 386,304 in 1941. The mortality rates in rural areas due to kala-azar and fevers were also greater than those in the urban areas.

The Assistant Directors of Public Health inspected 98 health circles during the year in addition to other special inspections. The rural sanitary inspectors visited 5,203 schools and examined 184,317 students against 207,988 in the previous year.

37. **District boards' income and expenditure.**—The total receipts in the 26 district boards including an opening balance of Rs. 39,00,164 aggregated to Rs. 1,80,89,472 during 1940-41 against the opening balance of Rs. 47,73,244 and the total receipts of Rs. 2,13,27,743 in 1939-40. The total receipts decreased by Rs. 32,38,271 or 15·2 per cent. as compared with the previous year.

The total expenditure excluding debts amounted to Rs. 1,48,51,294 against Rs. 1,54,28,899 in the previous year showing a reduction of Rs. 5,77,605 or 3·7 per cent. The following table shows the expenditure under some of the main heads and its percentage to total receipts during the year under report:—

Heads.	Total expenditure.	Percentage to total receipts. 1939-40.	1940-41.	Increase + or decrease —.
	Rs.			
Communication	39,12,272	19·5	12·6	—6·9
Buildings	2,31,419	1·1	1·3	+0·2
Public works	14,70,377	31·4	8·1	—23·3
Water-supply	6,20,958	3·8	3·4	—0·4
Drainage	44,382	0·2	0·2	±0
Sanitation	14,64,788	9·6	8·1	—1·5
Vaccination	2,57,408	1·2	1·4	+0·2
Epidemic charge	1,10,412	·5	0·6	+0·1

Compared with the previous year, the expenditure on water-supply, drainage, sanitation and vaccination decreased. The total expenditure on these items formed 13·8 per cent. of total receipts. The expenditure on water-supply, drainage, sanitation, vaccination and epidemic charges was one anna per capita.

38. **Village Self-Government (Union Boards).**—The total number of union boards in the province increased from 5,126 in 1939-40 to 5,140 in 1940-41. Excluding the opening balance, the income of union boards amounted to Rs. 1,01,94,348 in 1940-41 against Rs. 1,04,99,026 in the previous year. The expenditure of union boards decreased from Rs. 1,03,47,113 in 1939-40 to Rs. 99,68,700 in 1940-41 leaving a closing balance of Rs. 12,73,532 and Rs. 12,33,106 respectively. The expenditure on the important public health and other items as compared with the previous year is shown below:—

Items of expenditure.	1940-41.	1939-40.
	Rs.	Rs.
Roads	8,39,754	8,49,462
Water-supply	7,70,429	8,18,515
Drainage	99,995	94,463
Conservancy	94,605	98,915
Other sanitary items ...	59,049	78,669
Dispensaries	3,78,816	3,60,062
Chaukidars and dafadars ...	51,13,751	51,54,068

The figures given above show that in 1940-41 the expenditure on roads, drainage and dispensaries increased as compared with the previous year.

Chapter VI.

Malaria and Kala-azar.

39. **Provincial quinine grant.**—Government sanctioned a grant of Rs. 600,000 for free distribution of quinine throughout the province during the year under report. Same policy as in the previous year was followed in making detailed allotments of this grant.

40. **District anti-malaria schemes.**—In 1941 there was no further expansion in this sphere of the provincial public health activities. But the Assistant Director of Public Health, Malaria Research and the Malaria Engineer took necessary preliminary action by way of preparation of several such schemes and their adoption in the near future.

41. **Municipal anti-malaria schemes.**—Ten municipalities carried out anti-malaria measures out of their own funds supplemented by grants from the provincial revenues. The anti-malaria scheme in the Burdwan civil station area was continued in 1941 at Government cost while anti-mosquito measures in the Dacca-Ramna area was partly financed by Government.

42. **Special investigations.**—Field malaria research laboratories at Netrokona in the Mymensingh district and at Kalimpong in the Darjeeling district detected malaria infected mosquitoes of the species of A. philippinensis and A minimus at Netrakona and A. minimus in the montane and submontane areas of the Darjeeling district. Anti-malarial schemes at Jessore and Singur were also continued throughout the year. Special malarial surveys were carried out at Digha, Rangamati, Government Agricultural Farm in Krishnagar, and at some villages in the district of Bakarganj, 24-Parganas and in the villages along the Iswardi Abdulpur section of the Chapai Nawabganj Branch of the Bengal and Assam Railway.

43. **Malaria Research Laboratory.**—3,573 blood smears were examined. Out of which 1,197 were positive for malaria parasites. Of these 510 showed B.T., 541 M.T., 131 Q.T. and 15 mixed infections of B.T., M.T. or M.T., Q.T. parasites. 2,783 specimens of mosquito larvae and adults were identified. Out of 2,438 anopheles mosquitoes which were dissected for malarial infection, only two species, viz., A. philippinensis and A. sundaicus showed positive results.

44. **Ludlowii menace to Calcutta.**—Inside the city of Calcutta the intensity of ludlowii breeding was low whereas widespread distribution of A. ludlowii was revealed in the neighbourhood of Calcutta. In the Salt Lake area, ludlowii breeding was low owing to the vigorous control measures undertaken by the Bengal Public Health Department. In the river side areas along Kalighat-Falta Railway extensive breeding of A. ludlowii was detected.

Control operations at Salt Sake area, Budge Budge and Calcutta were continued during the year on the same line as in the previous year. There had been no epidemic outbreak of malaria in the areas under control.

45. **Provincial anti-kala-azar grant.**—The Government grant for anti-kala-azar campaign in Bengal was Rs. 1,20,000 during the year 1941. Out of this amount Rs. 17,000 was allotted to the Darjeeling district board, Rs. 1,000 to the Central Co-operative Anti-malaria Society, Rs. 74,000 to the various districts boards excluding Birbhum, Bankura, and Darjeeling, and Rs. 28,000 were spent on kala-azar specifics for the distribution amongst the district boards.

46. **Special kala-azar scheme in the Darjeeling district.**—The special anti-kala-azar scheme was carried out during the year 1941. The number of new and old kala-azar cases treated were 2,637 and 22,024 as against 2,837 and 22,611 in the previous year.

47. **Sale of quinine.**—The total quantity of quinine sold through post offices was 89,229 lbs. as against 120,319 lbs. in 1940. This decrease from the last year's figure might be responsible for rise in the provincial malarial deaths in 1941.

Chapter VII.

MATERNITY AND CHILD WELFARE.

48. **Maternity and child welfare.**—During 1941, 25 centres functioned. Of these, five centres, viz., Budge-Budge, Sriniketan, Baranagar, Berugram and Faridpur were started during the year under review as against three in the preceding year.

The maternity and child welfare centres in the Singur Model Health Unit area gave good facilities for institutional midwifery and domiciliary works. All the centres were run on the approved lines. Altogether 4,949 prenatal cases were on cards, of whom 2,244 attended the centres; 58 per cent. of the prenatal cases under care, were confined by the personnel of different health centres. All the centres rendered domiciliary midwifery services through trained dais and most of the cases were confined at home and certain percentages were also confined in the attached maternity homes. Because of the fact that the Births and Deaths Registration Act was not strictly observed and also for the apathy of the local bodies towards timely reporting of vital occurrences to the health visitors, it was extremely difficult for the health visitor to offer help to the neonatal cases within the

first few days which could have saved lot of infants from premature death. Out of 4,812 infants on cards, 3,047 infants were attended by the various centres.

Grants for maternity and child welfare work were given to the following bodies during the year under report:—

		Rs.
(1) Ramkrishna Sishumangal Pratisthan	...	1,500
(2) Mufassil health exhibitions and Bengal health welfare committee	...	9,000
(3) District maternity and child welfare committee	...	2,500
(4) Dai training classes for indigenous dais	...	1,500

Chapter VIII.

Medical inspection of school children and school hygiene work.

49. **Introduction.**—The medical inspection work for the Government and Government-aided secondary schools for boys in Calcutta, which was being carried out under the Education Department till March 1941 was transferred to the School Hygiene Division of this department in April 1941. The results of the medical inspection work under different heads were as follows.

50. **Medical inspection of school children in Calcutta.**—Out of 9,185 boys examined 3,582 were found defective for which notification cards were issued to the parents or guardians for treatment. 1,200 boys were found ill nourished. 303 boys were shabbily clad. 144 boys were suffering from skin disease. 347 boys had enlarged glands. 1,148 boys had enlarged tonsils and adenoids. 1,497 boys suffered from defective eye-sight. Only 45 boys had enlarged spleen. 62 boys were found unvaccinated.

5,009 boys were examined in 33 Government and Government-aided secondary schools for boys in Calcutta by the four School Medical Officers maintained by the Bengal Public Health Department during the year 1941. Thirty-seven pairs of spectacles were distributed free of charge to the poor boys suffering from defective eye-sight after necessary examination by this department.

51. **Medical inspection of schools in municipalities.**—During the year 1941, 8,945 students were examined in 22 municipalities by the health officers of those municipalities. 28·5 per cent. of these students were found well nourished, 4,880 or 54·5 per cent. fairly nourished, 1,538 or 17 per cent ill-nourished. 3,776 or 37 per cent. of the students were fairly clad and 1,391 or 15·5 per cent. shabbily clad. 715 students had enlarged tonsils for which their parents or guardians were notified for treatment. 70 students or 8 per cent. of the students had enlarged lymph glands. 33 or 3·7 per cent. students had defective eye-sight and they were referred to their guardians for necessary action. Only 191 students were unvaccinated.

52. **Medical inspection of students in rural areas.**—2,565 students were medically examined in schools in rural areas during the year 1941. 81 or 32 per cent. of the students were found well-nourished, 1,080 or 42 per cent. fairly nourished and 803 or 26 per cent. poorly nourished. 33 per cent. of the students were found decently clad in schools. 36 per cent had fairly good clothing and 31 per cent. were shabbily clad. 10 per cent of the students had bad teeth. Seven per cent. students had enlarged tonsils. 2·5 per cent. students had enlarged lymph glands. 3·3 per cent students had defective eye-sight. 1·5 per cent. students had nasal troubles. 2·1 per cent. students were unvaccinated.

The average height and weight at ages from 5 to 15 of scholars of Calcutta, other municipalities and rural areas as compared with the anthropometric standards at those ages are given below:—

Ages.	Anthropometric standard height in inches.	Height in inches of scholars.			Anthropometric standard weight in lbs.	Weights in lbs. of scholars.		
		Calcutta.	Municipalities.	Rural.		Calcutta.	Municipalities.	Rural.
5	41	40·3	40·8	40·4	39	37	37	33·2
6	44	42·1	43	42	42	40	40·3	37
7	46	44·1	44·2	45	46	43·3	43	42·4
8	49	47	45·6	49	52	48·1	47	47
9	49·7	48·7	47	52	55	51·4	49·6	52
10	51	50·5	50	52·3	62	57·4	57	57
11	53	51·8	51·6	52·8	68	61·7	63·4	62
12	55	53·6	54·3	55	76	67·8	64·2	70·4
13	56	54·8	55	58	87	77·0	78	81·4
14	59	57·9	56·2	60	96	88·3	86·8	87
15	61	59·8	58	62·5	100	93·7	96	93

53. **Leprosy in schools.**—The officers of the Bengal Branch of the British Empire Leprosy Relief Association visited and examined the students of 10 teachers' training schools numbering 864 and 41 other schools with 9,102 students including the staff. Forty-four cases of Leprosy were detected giving an incidence of 0·44 per cent. approximately. Lectures on leprosy were delivered in 23 schools of Bengal visited by the officers of the Association.

54. **Health education in schools and colleges in Bengal in 1941.**—*Physical training.*—In almost all the schools, physical training during school hours is compulsory for two periods weekly.

55. **Hygiene teaching.**—The University has recently introduced hygiene as a subject for matriculation examination.

Health education through Girl Guides and Bratachari movement was continued during the year under report.

56. **School Hygiene work in rural areas by circle sanitary inspectors.**—5,203 schools were visited in 1941 by the rural sanitary inspectors of 26 districts and 184,317 pupils were examined by them.

Chapter IX.

HEALTH PROPAGANDA.

57. **Health propaganda.**—Health propaganda has so far been mostly carried out in rural areas where the people are comparatively backward. About 164 sets of educational posters and charts and 159 sets of pamphlets on various public health subjects were supplied to 52 exhibitions held during the year. Sixty-four health models were displayed in six exhibitions. In big fairs and festivals health propaganda by means of lectures and magic lantern shows was carried out.

Chapter X.

VACCINATION.

58. **Staff.**—The total number of vaccinators employed in the provin during the year under report was 2,510 (2,255 in rural and 255 in urba areas) as against 3,061 (2,766 in rural and 295 in urban areas) during th previous year. The total number of Vaccination Inspectors and sub-inspe tors were 55 during the year against 56 in 1940. Two special inspectors vaccination were retained by the Bengal Public Health Department to hel the district boards and municipalities to organise vaccination campaig against small-pox epidemics as in the previous year.

The total number of vaccination operations performed in the provin was 8,369,442 consisting of 2,944,669 primary and 5,424,773 revaccination The total number of successful vaccinations performed was 4,334,810, which 2,586,350 were primary and 1,748,460 revaccinations. The ratio successful vaccinations per mille of population was 86·5, that is to say 86 per mille was rendered immune against small-pox. Out of 8,362,256 perso vaccinated 64·8 per cent. was male and only 35·2 per cent. female indicatin that females were less protected than males.

59. **Vaccination in rural areas.**—6,819,324 vaccinations (2,781,9 primary and 4,037,361 revaccinations) were performed in the rural are during 1941. The total number of successful vaccinations performed w 3,887,425 of which 2,435,915 and 1,451,510 were successful primary an revaccinations respectively.

60. **Vaccination in municipalities.**—The number of vaccinations do in the municipal towns and in Calcutta during 1941 are given below:-

Areas.	Primary.	Re-vaccination.	Total
Municipal towns	98,372	485,702	584,07
Calcutta	39,575	558,325	597,90
All towns including Calcutta	137,947	1,044,027	1,181,97

The percentages of successful primary vaccinations were 97·2 and 96 in the urban and the rural areas respectively during 1941. The ratio successful vaccinations per mille of population was 86·5 in the urban an 83·4 in the rural areas.

61. **Wastage of vaccine lymph.**—During the year under report 4,483,5 grains of vaccine lymph were issued from the Bengal Vaccine Institut The total wastage of lymph amounted to 1,654,977 grains during 1941. A the cost of manufacture of half a grain of lymph was 1·4 pies in 1941, th total wastage amounted to Rs. 12,067-8-9.

62. **Degree of protection afforded against small-pox.**—On an averag 8·5 per cent. of the people were successfully vaccinated every year. Th percentage of persons successfully vaccinated to total population was 8 during 1941.

63. **Degree of protection afforded to infants.**—The proportions children under one year successfully vaccinated per mille of available infa population in the rural and the urban areas are given in statement I appendix II. The infants protected against small-pox was 347·4 per mil (324·1 per mille in rural and 665·3 per mille in urban areas).

No complaint of post vaccinal complications was received during th year under report.

64. **Bengal Vaccine Institute.**—The total number of calves vaccinated during 1941-42 was 2,247 against 2,028, 2,057 and 2,194 of the three previous years.

The average yield of pulp per calf was 299 grains against 398 and 388·5 grains of the past two years.

4,070,518 grains of vaccine lymph were manufactured during the year against 7,312,965 and 4,377,860 grains of the two preceding years.

4,483,505 grains of vaccine lymph were issued during the year against 4,692,842 and 4,601,303 grains of the two previous years.

The cost of manufacture of vaccine lymph was 0·7 pies only per dose of half a grain of vaccine lymph or 1·4 pies per grain.

Bacteriological examination of vaccine lymph.—Seventy-four samples of vaccine lymph were tested at the Institute Laboratory by the Superintendent himself. The Director of Public Health Laboratory, Bengal, carried out the final tests of vaccine lymph as usual.

Storage of vaccine lymph at Krishnagar Depot as an A.R.P. measure.—Krishnagar Storage Depot for anti-small-pox vaccine lymph was started from June 1941. Some stock of vaccine lymph was stored there in two refrigerators at a standard temperature.

Lectures and demonstrations.—Lectures and practical demonstrations were delivered to the students of the D.P.H. class, M.B. students and to the students of the Calcutta Campbell Medical School on the method of preparation of lymph (anti-small-pox vaccine) by the Superintendent. Practical lectures and demonstrations on the public health administration were also given to the students of the D.P.H. class on vaccination.

With a view to disabuse the minds of lay public regarding misconception about the efficacy of vaccination—a brochure "Vaccination and Revaccination—A Sure Preventive against Small-pox" was compiled and published by the Bengal Public Health Department.

Chapter XI.

OTHER PUBLIC HEALTH ACTIVITIES.

Industrial Hygiene.

65. (*a*) *Septic tank latrines.*—Plans of septic tank latrine, activated sludge plants and bored-hole latrines in industrial areas, police-station, school and residential houses were approved by the Bengal Public Health Department in the year 1941.

(*b*) *Number of inspections, samples of effluents and action taken.*—Two hundred and eighty-two inspections were made during 1941 as against 308 in 1940. Samples of effluents could not be examined, as there was no staff for sewage analysis.

(*c*) *Health Propaganda.*—Health posters and leaflets were supplied as usual for distribution and display in the mill areas.

(*d*) *Nuisance.*—Several factories were inspected on receipt of complaints of nuisances and remedial measures suggested. The proposal of the Public Health Department for constructing a series of septic tank latrines on both the banks of the Hooghly river for use by the floating population has been engaging the attention of the Port Authority.

(*e*) *Industrial Hygiene.*—A proposal for creation of an industrial section with definite legal powers was submitted for the local Government's orders. Such a section is a crying need in view of the rapidly increasing labour population in this province.

Mines (Asansol Mining Settlement).

66. (*a*) *Vital statistics.*—The principal vital occurrences of the year 194 and 1940 compared with those of the Bengal Presidency are mentione below :—

Heads.	Asansol Mining Settlement. 1940.	1941.	Bengal Presidency 1941.
Total births	10,683	9,962	....
Birth rate	23·39	28·3	31·9
Total deaths	6,819	6,285	....
Death rate	14·93	17·8	23·7
Infant deaths	1,127	1,093	....
Infant mortality rate	105·5	109·7	155·7
Death rate from—			
Cholera	·56	·28	1·2
Small-pox	·09	·16	·2
Fevers	6·00	7·83	14·6
Pneumonia	0·90	1·14	0·9
Respiratory diseases	·95	1·10	1·7
Dysentery and diarrhoea	·69	·79	1·0
Other causes	5·74	6·55	4·1

(*b*) *General health.*—The general health of the population continued t be satisfactory. There was an increase in infant mortality rate from 105· per 1,000 live births in 1940 to 109·7 per 1,000 births in 1941. The lo death rate of 17·8 per 1,000 compared favourably with the birth rate o 28·3 per 1,000.

Sickness and mortality in collieries.—The principal diseases and death therefrom are summarised below :—

	Diseases.	Number of cases.	Number of deaths.
1.	Cholera	271	100
2.	Small-pox	43	3
3.	Enteric	173	15
4.	Malaria	23,732	104
5.	Other fevers	9,989	72
6.	Tuberculosis	36	10
7.	Pneumonia	340	74
8.	Influenza	2,891	1
9.	Bronchitis	2,996	22
10.	Other respiratory diseases	3,394	44
11.	Dysentery and diarrhoea	4,663	42
12.	Accidents (major and minor)	8,257	76
13.	Other causes	43,481	120
	Total ..	100,266	683

(*c*) **Control of Epidemics.**—(*i*) *Anti-cholera measures.*—62,186 person were inoculated in the mining area in 1941 of whom 30,083 inoculations wer carried out in collieries.

(*ii*) *Anti-small-pox measures.*—Revaccination was made compulsor under the Epidemic Regulations in areas declared infected. The tota number of vaccinations performed during 1941 was 85,722 (15,174 primar and 70,548 revaccinations). Rates of success were 84·5 and 15·9 per cent among primary and revaccinations, respectively.

(*iii*) *Leprosy.*—5,817 leprosy cases were detected of whom 1,248 wer infectious. 2,850 patients attended the 14 leprosy clinics during 1941 o whom 98 were discharged, 169 became symptom free, 86 infectious case became bacteriologically negative and 66 cases were admitted to the leper hospital.

(*iv*) *Maternity and infant welfare.*—One new maternity and infant welfare centre was opened during the year under report.

(*v*) *Health propaganda.*—Propaganda was carried out by a whole-time propaganda officer. The annual health and baby week show was also held during the year under report.

67. **Other special areas.**—(*a*) *Cooch Behar State.*—The vital statistical figures reflecting the public health conditions of the state during the year under report were as follows:—

Number of birth	...	15,550
Birth rate per mille	...	26·3
Number of death	...	13,892
Death rate per mille	...	23·5
Infantile mortality rate per 1,000 live births	...	118·7
Vital index	...	111·9

Four hundred and seventy-five deaths from cholera were reported during 1941. An epidemic of cholera in the State was controlled by giving 15,135 anti-cholera inoculations and disinfection of suspected sources. Malaria and other fevers were responsible for 83 per cent. of total deaths. Distribution of quinine and cinchona febrifuge, treatment of malaria patients at hospitals were carried out. 63,682 vaccinations (21,051 primary and 42,631 revaccinations) were performed.

(*b*) *Chittagong Hill Tracts.*—During the year under report malaria was highly prevalent from June to August. Quinine was freely distributed and other anti-malarial measures were taken. Two hundred and thirty-seven deaths from cholera were reported during 1941. Anti-cholera inoculations were given in those areas which were provided with public health staff. There were only 3 cases of small-pox but no deaths. A number of tanks and wells were constructed and also a number of bored hole latrines was provided in the bazar and thana areas.

(*c*) *Duars Planters area.*—The chief vital events of this area are furnished below:—

		1940.	1941.
Birth rate per mille of estimated population	...	38·47	42·04
Infantile mortality rate per 1,000 live birth	...	82·96	114·8
Death rate per mille of estimated population	...	24·41	23·17
Deaths from—			
Cholera	...	41	5
Small-pox	...	7	6
Fevers	...	1,228	1,314
Kala-azar	...	9	10
Dysentery and diarrhoea	...	1,024	950
Phthisis	...	490	541

The number of gardens registered was 155. The census population 1941 was 291,253. All the European gardens and 20 out of 51 Indian gardens were supervised during 1941.

Public Analyst.

68. (*a*) **Bengal Public Health Laboratory.**—*Analysis of water.*—In 1941, 1,744 samples of water were examined chemically and 3,645 bacteriologically as against 1,742 and 3,666 respectively in the previous year. Of these, 1,084 chemical and 938 bacteriological related to jute mills. As in the previous year, regular monthly examination of water from 63 mills under Indian Jute Mills water-supply analysis scheme, 19 municipal waterworks and the

waterworks of the Bengal Engineering College, Shibpur, was carried out. Samples from Government and private parties were also analysed.

Analysis of food-stuffs.—Total number of samples of food-stuffs received during the year from all sources was 8·686 against 9,178 in 1940 and the total number of samples analysed was 9,442 as compared with 8,314 in 1940. 1,127 samples of food-stuffs were also received for analysis from the Carmichael Hospital of Tropical Medicine and Medical College Hospital and of these 1,098 were of milk, 13 of butter and ghee each and 3 of mustard oil.

The samples of various food-stuffs sent for analysis by the district boards and municipalities during the year under report as compared with those of the previous year and the percentages to total number were as under:—

Articles.	District Boards.				Municipalities.			
	1941.	Percentage of the total.	1940.	Percentage of the total.	1941.	Percentage of the total.	1940.	Percentage of the total.
Mustard oil ..	3,582	70·9	4,358	74·2	1,026	42·1	1,018	42·[illegible]
Ghee ..	790	15·6	844	14·3	770	31·6	740	31·[illegible]
Milk	485	9·6	517	8·8	393	16·1	427	17·[illegible]
Butter ..	6	0·1	6	0·1	17	0·7	18	0·[illegible]
Dahi	41	0·8	4	..	42	1·7	28	1·[illegible]
Channa ..	11	0·2	37	0·6	2	..	..	..
Atta and wheat flour.	52	1·0	42	0·7	120	4·9	109	4·[illegible]
Tea	66	1·3	67	1·1	43	2·1	42	1·[illegible]
Sugar ..	18	0·4	..	..	14	0·6	..	..

From the above table it appears that about 70 per cent. of the samples received from the district boards and 42 per cent. of the sample received from the municipalities were of mustard oil as against 74 per cent. and 4[illegible] per cent. respectively, in the previous year.

The number of samples of food-stuffs from the district boards and municipalities analysed during the year as compared with those of 1939 and 1940 are tabulated below:—

Articles.	District Boards.				Municipalities.			
	Number of samples analysed.	Percentage found adulterated.			Number of samples analysed.	Percentage found adulterated.		
		1941.	1940.	1939.		1941.	1940.	1939.
Mustard oil ..	4,205	34·2	35·4	39·3	1,050	25·0	30·6	34·[illegible]
Ghee	768	45·1	49·3	57·9	883	39·6	39·6	41·[illegible]
Milk	478	70·7	75·4	75·2	397	54·1	57·8	62·[illegible]
Butter ..	6	86·3	100·0	100·0	18	33·3	58·8	76·[illegible]
Dahi	40	85·0	50·0	83·1	42	50·0	42·8	72·[illegible]
Channa ..	16	68·7	92·1	..	2	100·0	..	..
Atta and wheat flour.	47	4·2	2·5	2·7	147	0·7	..	..
Tea	70	2·8	9·8	12·5	60	1·6	11·3	2·6
Sugar ..	2	50·0	..	..	13	..	..	..

(*b*) **Dacca Branch Public Health Laboratory.**—*Water.*—Altogether 294 and 901 samples of water from various sources including ten waterworks were examined chemically and bacteriologically in 1941 as against 299 and 971 respectively in 1940.

Analysis of sewage effluent.—One hundred and four samples of sewage and effluents from the Dacca Sewerage Works were chemically examined in 1942 as against 314 in 1940.

(*c*) **Darjeeling Municipal Laboratory.**—*Water.*—Five hundred and thirty-seven samples of water were examined, 68 chemically and 469 bacteriologically during 1941 as against 524 (61 chemically and 463 bacteriologically) in 1940.

Food-stuffs.—The result of the examination of food-stuffs were as follows:—

Food stuffs.	Number of samples examined.	Number found adulterated.	Percentage of adulteration. 1941.	Percentage of adulteration. 1940.
Milk	598	30	5·0	8·4
Butter	22	1	4·5	..
Mustard oil	129	1	0·8	..
Ghee	125	26	20·8	17·5
Flour	1	..	..	..
Atta	1	..	..	..
Total ..	876	58	6·6	7·2

Clinical examination.—3,702 specimens of blood, urine, etc., were examined during the year as against 3,505 in the previous year.

(*d*) **District Public Health Laboratories and the Municipal Public Health Laboratory at Dacca.**—*Analysis of water.*—Two hundred and ninety-seven samples of water were analysed chemically and 732 bacteriologically at these laboratories during the year under report.

Analysis of food-stuffs.—Altogether 10,827 samples of food-stuffs were analysed and 2,429 specimens of clinical samples examined at these laboratories during 1941.

(*e*) **Bengal Vaccine Laboratory.**—During the year under report 3,685,100 c.c. of anti-cholera vaccine was prepared. This together with the balance of 73,955 c.c. of the previous year amounted to 3,759,655 c.c. The total production in 1940 was 1,424,995 c.c. In 1941 the output exceeded all previous year's records. The quantity of vaccine issued, free of cost, during 1941 was 3,642,345 c.c. and the quantity sold was 63,035 c.c. making up a total issue of 3,705,380, c.c. and the balance at hand at the end of the year under report was 53,675 c.c.

69. **S. N. Mallik Maternity Home and Model Health Unit, Singur.**—The Model Health Unit at Singur ushered its third year of existence in 1941.

During the year under report, there were 1,919 live births within the unit area as against 1,835 in 1940. The birth rates based on census population of 1931 worked out to 48·0 per mille as compared with 45·9 in the previous year and 32·5 per mille in the rural areas of the province. The recorded number of deaths increased from 724 in 1940 to 839 in 1941 giving death rates of 18·1 and 21·0 per mille, respectively, while the death rate in rural areas of the province during 1941 was 23·8 per mille.

Two hundred and sixty infants under one year died during 1941 giving an infant mortality rate of 135·5 per 1,000 live birth as against 125·9 in the previous year. As in the previous year, 16 mothers died during child birth in 1941, the maternal mortality rate being 8·2 per 1,000 births (live and still).

The record of maternity and child welfare activities of the unit was one of steady progress. The number of maternity and child welfare centres increased from 6 in 1940 to 7 in 1941. The number of pregnant women who were brought under the care of the centres also increased from 1,331 in the previous year to 1,430 in 1941. The percentage of cases which received skilled aid at birth was 27·4 in 1941 against 26·1 in 1940.

2,252 anti-cholera inoculations were performed and 137 houses and 72 tanks were disinfected.

During the year under report, 3,070 primary and 3,424 revaccinations were performed against 2,062 and 2,216 respectively in the previous year.

Anti-malaria work was done in Singur, Apurbapur and Jalaghata villages in the Singur union and Madhubati village, in the Balarambati union.

During the year under report 33 bored-hole latrines were constructed by way of experiment to see if this system would be suitable for the area.

With a view to educating the masses in health matters, 1,378 health talks, 20 lantern lectures, 265 lectures and 2 cinema shows were conducted.

70. **Nutrition and diet survey.**—The survey was completed in seven districts and partially done in three other. 4,009 scholars were examined in 19 schools in nine districts (*vide* Table 1, Appendix IV). Of these 2,597 were boys and 1,412 were girls. Besides the scholars, 599 persons and 266 children below 6 years of age, were examined during the course of house to house visits in eight districts of Bengal. The total number examined therefore amounted to 4,874. The heads of the institutions were informed about the hygienic defects detected amongst the students and they in their turn requested the guardians concerned to take necessary curative measures. Details are shown in Appendix IV.

71. **The Bengal Public Health Association.**—A voluntary organisation under the name and style "The Bengal Public Health Association" has been formed in this province with branches in all districts throughout the province. It is mainly composed of the public health workers under Government, local bodies and other authorities in the province and other members of the public interested in public health. The object of the Association is of comprehensive nature and practically touches all aspects for the development of the public health organisation, and perhaps this is the only body of its kind throughout India. Eminent sanitarians of the province are associated with it and this body co-operates with the public health organisation of the province in a most intimate and useful way. It was duly registered under Act XXI of 1860 and the local Government have decided to consult it relating to important public health matters. The Government have further allowed their officers to join the Association. The resolutions passed by this Association were found to be useful and at the instance of this Association, the Government have taken suitable steps in different administrative branches of public health.

The Association has published a Journal of its own, viz., "The Bengal Public Health Journal". The distinctive features of the Journal are that besides original articles by experts it contains extracts from important public health articles published in other countries, public health notes and

news of the province and important public health law cases. Apart from its value as a medium for health propaganda, it helps the public health workers to keep themselves abreast with the latest public health activities.

The Association is further advancing the cause of public health by organising public health conferences with sections dealing with different public health problems. In these conferences experts take part in deliberations and these help to focus the attention of the public as well as the administration towards the various intricacies of public health problems.

Above all these this Association is now serving as the information bureau for all public health matters.

Chapter XII.

GENERAL REMARKS.

72. **Personal proceedings.**—Lt.-Col. A. C. Chatterji, I.M.S., held the post of the Director of Public Health till the 19th day of August 1941, when he reverted to temporary military duties and from that date Dr. B. Mookherjee acted as Director of Public Health throughout the remaining part of the year. He was the Assistant Director of Public Health, Presidency Circle, up to the 19th August and from that date to the 18th September he held the charge of the Circle in addition to his duties as Director of Public Health. From the later date Dr. Md. Fahimuddin held the post of the Assistant Director of Public Health, Presidency Circle. In addition to his duties as Assistant Director of Public Health of that Circle he held the charge of his former post of the Assistant Director of Public Health, Rajshahi Circle, till 6th October, when Dr. Md. Nasiruddin, temporarily appointed as Assistant Director of Public Health, took the charge of the Rajshahi Circle. Dr. S. N. Mitra held the post of the Assistant Director of Public Health, Burdwan Circle, till the 20th day of February when he proceeded on leave for three months and Dr. Md. Jabbar was appointed to act in his place and on return from leave Dr. Mitra was temporarily appointed as Assistant Director of Public Health, School Hygiene, with effect from 20th May and Dr. Jabbar continued to act as Assistant Director of Public Health, Burdwan Circle, for the rest of the year. Dr. S. N. Sur and Captain J. D. Sinha held the posts of Assistant Director of Public Health, Dacca Circle and Assistant Director of Public Health, Malaria Research, Bengal, respectively, throughout the year. There was no change in the posts of the Director of Public Health Laboratory and Inspector of Septic Tank Installations which were held by Dr. A. K. Sen and Dr. A. C. Roy Chaudhuri respectively. Dr. (Miss) S. Pandit acted as the Superintendent of Maternity and Child Welfare Works, Bengal, till the expiry of the term of her service on the 17th July when Dr. (Mrs.) S. Mitra took the charge of the office. Dr. S. N. Chatterjee continued to hold the charge of post of Nutrition Survey. Mr. H. N. Worth and Mr. V. K. Parthasarathy continued to act as the Malaria Engineer and the Superintendent of Vital Statistics and Vaccination, respectively, throughout the year. Mr. Anwarul Huq, B.C.S., held the post of the Personal Assistant to the Director of Public Health. The entire departmental establishment worked satisfactorily.

B. MOOKHERJEE, M.B., D.P.H.,
Director of Public Health, Bengal.

CALCUTTA:
The 11th March, 1943.

Part II

Note.—(1) As the populaton in each age group in urban and rural areas is not given in the census report [illegible] 1931, it was estimated by distributing the population in each area in the ratio in which the total population [illegible] distributed according to the age groups. The age specific death rates in this table were calculated on the estima[illegible] population.

(2) The age specific death rates under one year have been calculated on the number of live births record[illegible] during the year.

Department of Public Health and Local Self-Government.

Public Health Branch.

RESOLUTION—No. 1791P.H.

Calcutta, the 21st August 1944.

Read—

The Report of the Director of Public Health, Bengal, for the year 1941.

Vital Statistics.—The number of births registered during the year was 1,594,291 against 1,681,846 in the previous year, thus representing a decrease of 87,555. The birth rate was 31·9 per mille being 5·3 per cent. below the rate of 1940. The deaths, 1941 numbered 1,184,850 against 1,111,082 in 1940 representing an increase of 73,768. The death rate was 23·7 per mille and was 6·6 per cent. higher than that of the previous year. The total births exceeded the deaths by 409,441 against an excess of 570,764 in the previous year. The simultaneous deterioration in respect of birth rate and death rate is a rare occurrence in the provincial health-records. The last two occasions on which a similar incident took place was in 1918, the year of the Influenza epidemic, and in the year 1938. The highest birth-rate of the year (41·4 per mille) was recorded in the district of Murshidabad while the lowest (20·4 per mille) was recorded in the Malda district. Excluding "other classes" the highest birth-rate (32·1) was recorded among the Muslim community, while the lowest (26·7) was among the Bhuddhists. The number of male-births per 100 female births was 108, as in the previous year. The highest death-rate (33·5 per mille) was returned by the Darjeeling district while Malda recorded the lowest rate of 13·8 per mille. Excluding "other classes" the Muslims showed the highest death-rate (24·6 per mille), while the lowest (15·6 per mille) occurred among the Christians.

Infantile and Maternal Mortality.—The number of infantile deaths in 1941 aggregated to 248,226 as against 267,894 in 1940 giving an infantile death rate of 155·7 per mille of live-births against 159·3 in the previous year. Compared with the preceding year the infantile mortality rate decreased by 2·3 per cent. The number of still-births in the province was 61,904, returning a rate of 3·9 per 100 live-births as against 69,844 in 1940 with a rate of 4·2. In the urban areas the still-birth rate was 4·6 per 100 live-births, while in the rural areas, the corresponding rate was 3·8. 14,803 mothers died as a result of child birth in the year under review, the corresponding figures were 15,758 in 1940 and 15,792 in 1939 (a decrease of over 6 per cent.). It is a happy feature that even after making allowances for the possible inaccuracy in recording this class of deaths, the figures for the last 4 years bespeak of definite improvement in this direction.

General Epidemiology.—The public health of the province in this respect did not present a bright picture in the year under review.

Cholera.—During the year under report 61,879 deaths from cholera were registered with a death rate of 1·2 per mille as against 21,743 deaths in 1940, with a death rate of 0·4 per mille. The quinquennial average death rate from cholera was 0·9 per mille.

Statistical analysis revealed that cholera moved in a cyclic course of six years and as the previous year's cholera incidence was the lowest on record, it could be reasonably apprehended that the disease for the year under report would take an upward trend.

3,482,398 anti-cholera inoculations were performed during 1941 as against 1,353,793 in 1940. Other anti-epidemic measures consisted of disinfection of 1,272 river ghats, 12,544 houses, 239,103 wells, and 39,693 tanks. Ninety-seven epidemic doctors, 32 Sanitary Inspectors and one Health Assistant were employed to assist the various local bodies in anti-cholera work in the province during the year under report.

Small-pox.—This disease accounted for 13,250 deaths in the year under review compared to 5,608 deaths in the preceding year. The mortality rate was 0·3 per mille as against 0·4 per mille during the previous quinquennium. The mortality rate among infants under one year of age showed a marked increase.

The total number of vaccination operations performed in the province was 8,369,442 as against 8,476,920 in 1940. Out of the persons vaccinated 64·8 per cent. were male and only 35·2 per cent. female. The greater susceptibility of females to small-pox infection was ascribed by the Director of Public Health, to the system of purdah and paucity of female vaccinators. Out of 27 districts of Bengal 16 districts did not employ female vaccinators at all. Government take this opportunity to reiterate the urgent necessity on the part of the local authorities of carrying on a vigorous campaign of vaccination so as effectively to cover the population of the entire province. On an average 8·5 per cent. of the people were successfully vaccinated every year. The percentage of persons successfully vaccinated to the total population was 8·7 during 1941. Th average cost of production of vaccine lymph per dose of half a grain in the Bengal Vaccine Institute amounted to 0·7 pies only, *i.e.*, an increase of 0·2 pies over the figure of the previous year.

Fevers—Malaria and Kala-azar.—Mortality from "fevers" rose from 717,516 in 1940 to 732,884 in 1941, showing an increase of 2·1 per cent. over the previous year.

Malaria.—There were 388,381 deaths from malaria during 1941 compared with 369,448 during the previous year showing an increase of 5·1 per cent. Malaria alone was responsible for 32·8 per cent. of the total deaths recorded in the province in 1941 and claimed 52·99 per cent. of the total mortality from fevers against 33·3 and 51·5 respectively in the previous years. The number of deaths from malaria in urban and rural areas were 2,077 and 3,86,304 respectively and the respective mortality rates were 0·59 and 8·3 per mille. The highest death rate of 19·77 per mille was recorded in the Jessore district, while the lowest rate of 0·48 was recorded in Calcutta.

Kala-azar.—16,349 persons died of kala-azar during the year giving a mortality rate of 0·33 per mille as against 15,453 deaths with a mortality rate of 0·31 per mille in the previous year. There were 0·17 deaths per mille in the urban areas and 0·33 per mille in the rural areas as against 0·16 and 0·32 respectively in the previous year. The special kala-azar scheme inaugurated in the district of Darjeeling was continued during the year under review.

Respiratory Diseases.—In the year under review 84,647 deaths were attributed to this cause as against 85,203 in 1940, the respective mortality rates being 1·70 and 1·71 per mille. The highest death rate of 7·86 per mille was as usual, recorded in Calcutta and the lowest in Malda with a death rate of 0·29 per mille.

Pneumonia.—It took a toll of 44,801 lives as against 44,967 in the previous year. The death rates in the two years, viz., 1940 and 1941, were almost the same, viz., 0·9 per mille. Pneumonia was responsible for 52·9 per cent. of the total mortality from respiratory diseases.

Pulmonary Tuberculosis.—12,867 persons died of Pulmonary Tuberculosis during 1941 as against 12,363 in 1940, the mortality rates being 0·26 and 0·25 per mille respectively. The deaths from the disease in the rural areas were 8,322 and in the urban areas 4,545 yielding a death rate of 0·20 and 1·29 per mille, as against 0·17 and 1·26 in the previous year. Calcutta with a death rate of 2·64 per mille was alone responsible for 66·2 per cent. of the deaths recorded in urban areas.

Both the tuberculosis surveys at Barisal and Serampore were continued during the year under report and valuable statistical data have been collected for publication and use. The Tuberculosis Association of Bengal as usual carried on their anti-tuberculosis campaign of great utility and service to the suffering humanity.

Other Respiratory Diseases.—24,058 deaths were recorded under "other respiratory diseases" in 1941 as against 26,036 in 1940, the mortality rate being 0·48 and 0·52 per mille respectively.

Other Diseases—Enteric Fever.—Deaths registered on account of enteric fever were 8,948 as against 7,875 in 1940.

Influenza.—It accounted for 1,759 deaths as against 2,127 in 1940.

Cerebrospinal Fever.—955 deaths were ascribed to this cause in 1941 in place of 1,378 in the previous year.

Typhus Fever.—The number of deaths from this disease further increased from 5,183 in 1940 to 5,640 in 1941.

Dysentery and Diarrhoea.—Dysentery and diarrhoea were together responsible for 51,529 deaths in 1941 as against 45,422 in 1940, with mortality rates of 1·03 and 0·91 per mille respectively.

Injuries.—21,476 deaths were recorded under "injuries" with a rate of 0·43 per mille as against 20,254 deaths with a death rate of 0·41 per mille in 1940. Out of the total deaths, 13,956 were due to wounds and accidents, 3,593 to snake bites, 2,834 to suicides, 474 to rabies, 358 to homicides and 261 were killed by wild animals.

Leprosy.—1,596 deaths from leprosy were recorded in the year under review of which 1,556 occurred in rural areas and 40 in the urban areas, as against 1,304 deaths (1,273 in rural areas and 31 in urban areas) in the previous year. Calcutta, it is worth-noticing, did not record any death from leprosy.

Fairs and Festivals.—The Public Health Department and the local authorities concerned co-operated with great success in undertaking preventive measures such as provision of protected water-supply, efficient conservancy, mass inoculation, arrangements for wholesome foodstuff and proper accommodation of the pilgrims in the chief melas in the province, viz., Ganga Sagar, Langalband, Sitakund, Allowakhowa and Tarakeswar during the year under report. With the exception of the Ganga Sagar Mela where there were only four deaths from cholera no death was reported from any of the other melas.

Sanitation and Water-supply.—The municipal bodies in Bengal spent Rs. 52,26,801 or 41·9 per cent. of their income on Public Health against 38·4 per cent. in the previous year, comprising Rs. 25,77,597 on conservancy, Rs. 11,28,936 on water-supply and Rs. 4,48,164 on drainage. The average incidence of taxation per head of municipal population was Rs. 3-9-3p. in 1940-41 against Rs. 3-6-1p. in 1939-40 and the average expenditure per head of municipal population was Rs. 2-3-3 in 1940-41 against Rs. 2-4-4 in the previous year.

The District Boards in the rural areas generally maintained their proportionate expenditure on water-supply, drainage, sanitation and vaccination by spending 3·4, 0·2, 8·2 and 1·4 per cent. respectively of their total receipts during 1940-41 compared to 3·8, 0·2, 9;6 and 1;2 per cent. during the preceding financial year.

During the year under review increased grants by Government towards supply of drinking water in the rural areas, as in the preceding year, were distributed among the different districts in accordance with the revised policy of distribution and disbursement of the annual grant for the improvement of rural water-supply. It is, however, a matter of grave concern to the Government that proper steps are not being regularly taken by the local bodies for due maintenance and repairs of the sources of water-supply provided by Government. The question of repairs and maintenance of the sources of water-supply seriously engages the attention of the Ministry

In 118 municipalities (excluding Calcutta) 33 Health Officers, 110 Sanitary Inspectors and 1 Assistant Sanitary Inspector were employed during 1941 as against 25 Health Officers, 122 Sanitary Inspectors in the previous year. Government view with grave concern the fact that 25 municipalities still did not employ either a Health Officer or a Sanitary Inspector during 1941 (against 29 municipalities in the previous year). The public health duties in these municipalities were carried out by Sanitary Inspectors of the district boards or of the neighbouring municipalities.

Water-supply.—Filtered water was supplied through pipes in 51 municipalities. 2,837 tube wells were sunk in 97 municipalities during 1941.

Drainage.—The total length of pucca drains constructed in 92 municipalities during 1941 was 658 miles 973 yards and 46 feet approximately.

Food Adulteration.—The total number of sample of foodstuff seized was 3,704 in 72 municipalities and 1,145 prosecutions were started in 61 municipalities during the year under review.

School Hygiene.—Medical inspection of the school children in municipal as well as rural areas was carried out by the Public Health Department and by the Health Officers of the local authorities concerned. Out of 9,185 school-going children in Calcutta 1,200 boys were found ill-nourished. 5,009 boys were examined in 33 Government and Government aided secondary schools in Calcutta. The Health Officers of the municipalities concerned examined 8,945 students in 22 municipalities in the province out of which number 1,538 or 17 per cent. were found to be ill-nourished. In the rural areas 2,565 students were medically examined out of which number 803 or 26 per cent. were discovered to be ill-nourished. Besides this the Circle Sanitary Inspectors visited 5,203 schools in rural areas and 184,317 pupils were examined by them. The Director of Public Health has drawn attention to the fact that besides the defect of ill-nourishment the school children also suffered from such defects as skin-disease, enlarged glands, defective eyesight, enlarged tonsils and adenoids and enlarged spleens in varying degrees. The officers of the Bengal Branch of the British Empire Leprosy Relief Association visited and examined the students of 10 teachers' training schools numbering 864 and 41 other schools with 9,102 students including the staff. 44 cases of leprosy were detected giving an incidence of 0·44 per cent. approximately.

Health Propaganda.—Public Health Propaganda during the year under review was carried on by means of educational posters, charts, models and pamphlets. It was realised that the rural areas with their ignorance in matters relating to the public health stood in most need of such propaganda. Exhibitions, fairs and festivals were chiefly made the occasions for such propaganda. Lectures on public health matters were delivered by means of magic lanterns.

Miscellaneous.—The normal activities of the Public Health Department were maintained and their scope was widened in certain directions. Grants-in-aid on the usual scale were made to the local bodies and voluntary associations in order to enable them to carry out their programme of health welfare services. Besides making the usual contributions towards the salaries of the health officers employed by the local bodies, Government incurred an expenditure of more than 11½ lakhs of rupees in assisting the district boards to maintain the thana public health units in the rural areas. An increased grant of 7½ lakhs from the provincial revenues was repeated during the year under review for the improvement of rural water-supply. Other subsidies to local bodies included Rs. 1,20,000 for combating kala-azar and Rs. 50,000 for free vaccination as in the previous years. Government sanctioned in the year under review Rs. 6,00,000 for free distribution of quinine. The usual grant of Rs. 10,000 to the Tuberculosis Association, Bengal, as well as to the Bengal Branch of the British Empire Leprosy Relief Association were also made.

General Remarks.—The year 1941 could not be described as a happy one from the point of view of public health. The rate of mortality especially from the diseases of cholera, small-pox, malaria and kala-azar was higher during the year. It is a happy sign, however, that there was a general awakening of health conciousness of the people. As a concerete example of this mention may be made of the voluntary organisation under the name "The Bengal Public Health Association" with its branches in all districts throughout the province.

Personnel.—Lt.-Col. A. C. Chatterjee, I.M.S. held the post of the Director of Public Health till the 19th August 1941 when he reverted to temporary military duties. From that date Dr. B. Mookherjee, M.B., D.P.H., acted as the Director of Public Health during the remaining period of the year.

By order of the Governor,

E. W. Holland,

Secy. to the Govt. of Bengal.

in the districts of the Bengal Presidency during each month of the year 1941.

N.B.—House to house subjects were surveyed in previous year in the districts marked with single asterisks and scholars were surveyed in previous year in the districts marked with double asterisks.

TABLE 5.

The haemoglobin percentages taken as standard of anaemia in the districts surveyed during the year 1941 are as follows :—

District.	Male.	Female.
Dinajpur	67·56	64·53
Jessore	67·97	66·47
Midnapore	68·72	68·50
Hooghly	73·73	69·46
Burdwan	67·40	63·00
Bakarganj	71·34	69·14
Jalpaiguri	73·95	56·40
Chittagong Hill Tracts	75·68	63·31
Bankura	69·91	60·57
Tippera	70·47	64·42

TABLE 6.

Statement showing the percentage of deficiency of protein, fat, calcium, phosphorus, iron and vitamins A, B and C in the diet of the families during the year 1941.

District.	No. of families surveyed.	Percentage of deficiency in—							
		Protein.	Fat.	Calcium.	Phosphorus.	Iron.	Vitamins.		
							A	B	C
1	2	3	4	5	6	7	8	9	10
Birbhum ..	17	76·5	82·4	94·1	47·0	47·0	100·0	47·0	47·0
Jessore ..	30	43·3	76·6	96·6	10·0	6·6	100·0	3·3	86·6
Midnapore ..	29	79·3	86·2	100·0	51·7	5·9	100·0	5·9	82·8
Hooghly ..	29	82·8	96·5	93·1	69·0	51·7	100·0	27·6	96·5
Burdwan ..	37	97·3	100·0	100·0	2·7	8·1	100·0	2·7	100·0
Bakarganj ..	30	93·3	100·0	100·0	16·7	40·0	100·0	16·7	100·0
Chittagong Hill Tracts ..	29	48·3	100·0	100·0	6·9	10·3	100·0	3·4	100·0
Bankura ..	38	100·0	100·0	100·0	55·3	71·0	100·0	57·9	100·0
Tippera ..	25	80·0	100·0	100·0	4·0	16·0	100·0	8·0	100·0
Tippera (Hill) ..	10	60·0	100·0	100·0	..	..	100·0	..	100·0
Darjeeling ..	15	80·0	93·3	100·0	40·0	46·7	100·0	46·7	100·0

N.B.—Minimum quantity of food factors required per adult per day :—Protein 60 grms., Fat—45 grms., Calcium— ·6 grms., Phosphorus 1·0 grm., Iron—12·5 grms., Vitamins A—3,000 International Units, B—300 International Units, and C—30 m. grms.
